

ICD-10 Diagnosis Codes

Commonly Associated with the OVA1[®] plus Assay*

OVA1[®] coverage is defined by current Novitas LCD L35396, Biomarkers for Oncology. The OVA1[®] assay is covered according to the FDA label and reported using CPT code 81503. However, no procedure to diagnosis code pairing are presently published in LCD L35396 for CPT code 81503.

FDA labeling states that the test is not intended for ovarian cancer diagnosis, thus neoplasm diagnosis codes are not appropriate. However, ICD-10 codes indicative of the signs and symptoms or diagnosed presence of a pelvic mass would be expected to be covered as well as abnormal findings from imaging studies or cancer marker tests.
